A Second Life to Your Unit

A DISAB Vacloader is built by carefully selected and quality tested parts to secure that your Vacloader is a market standard setting machine and a reflection of our quality engineering and design. To keep reliability and guarantee a trouble-free ownership, it is important that you continue to use original parts and that you turn to an authorized service centre with your Disab.

We have been in business for over 30 years and will always be there for you! We stand for reliability, competence and continuity. At DISAB all our parts are sourced to high exacting standards, our technicians are specialists, they are very experienced and have the best resources to service your Vacloader. All this means that you can concentrate on expanding your business while we look after your machine.

When you service your Vacloader, you receive a free status report of your unit - this is unique for DISAB.

Don't trade away the reliability!

If you service your Vacloader at an authorized service centre, it won't cost you more, when you consider the residual value of your Disab.
