

System Design

A central vacuum system from DISAB gives you a cleaner and more efficient production with a reduced maintenance cost.

- Higher productivity
- Higher product quality
- Better working environment

Our wide range of products, directed towards the industry, has grown consistently for more than 25 years. This means a substantial experience of adaptations to fit our customers' requirements. By hiring us as a cooperation partner, you will get a grip of the whole process from the requirement analysis throughout the installation process.

Our wide range of accessories and spare parts as well as a reliable service organization, enables you a problem free vacuum system.

System Design

Installation

Our systems are always built with sustainability and easy service access in mind. The standard pipe system is built with steel pipes for straight installations and with bends in rubber, which is favorable when it comes to wear and tear. It also makes it easier to fix possible stops in the system.

The whole system, including cleaning accessories, is electrical earthed to prevent static electricity to build, and avoid sparks and shock for the user.

The suction outlets are self closing, and can be fitted with a switch for remote control.

System supply:

DISAB offers services to fit the customers' needs. These contains of:

- System design
- Drawings
- Planning
- Installation supervision
- On-site management
- Complete installations
