

# YET ANOTHER DISA-CLEAN™ DELIVERED!

Last week another DISA-CLEAN™ was delivered, this time to Ragn-Sells AB, Sweden.

Ragn-Sells has worked with an ecological approach for a long time that really stands out from the crowd. They work hard to maintain their position as Sweden's foremost experts in recycling and environmental issues.

With DISA-CLEAN™ they aim to be at the forefront of reducing particle levels in the air to within the benchmarks set by the EU.

Robin Martinussen, Division Manager within Ragn-Sells says: *"During the last few years we have realised that our customers within the industrial and building sectors are now more conscious about their working environment than before. They want to create better conditions in the work place for both their employees and customers."*

*"The increased legislation of the environment in cities is also one of the reason why we want to be a leader in technological development, towards better air quality for us all."*

*"DISA-CLEAN™ is today the only sweeper unit that manages the particle levels in the cities. It can be used the year around as no water is added during the cleaning process. Instead it is achieved through vacuum and high capacity filters."*

Robin continues: *"We believe in new customer markets and it will not be long before we need more DISA-CLEAN™ in our fleet."*

At DISAB we are grateful for the confidence Ragn-Sells has given us and are very much looking forward to a good partnership to develop the optimum area cleaner for the future.
